c. Some how my R2600 boot flash is dead and I cannot boot it. Do I need to flash again my boot flash? I'm afraid to go back to spindle-head (I don't have one of those handy) to change it . Or do I need to try some other boot disk (read: can run here if I can get it to work with R2600)? Thanks. A: Boot disks don't work on the R2600. You need to use a SPI port (SPI flash) programmer. Here's a boot disk that works on the R2600: Q: Using regex to find a variable in a string - C# Hi I am trying to find a specific variable in a string and assign it to a new variable. string regex\_and = "S\d+" string my\_variable = "This is another variable"; I want my\_variable to be replaced by the integer inside of regex\_and. This is what I have so far: string[] toReplace = regex\_and.Split(' '); Regex regex = new Regex(@"\d+", RegexOptions.IgnoreCase); int my\_variable = regex.Match(my\_variable).Value; You need to use Regex.Replace to replace the string with the integer value in the regular expression (as it is a variable): string my\_variable = Regex.Replace(my\_variable, regex\_and, "\$my\_variable"); You can use Regex.Replace: string my\_variable = Regex.Replace(my\_variable, regex\_and, m => "SS" + m.Value); SSd+ is not a regular expression, but a string literal that the compiler has to escape. To make it a regular expression, you'd need to escape the backslash \. You can use a regular expression that finds the substring you are interested in: string my\_variable = Regex.Replace(my\_variable, "S\d+", m => m.Value); Dub 82157476af
